

The CERN 911 Sentinel

Volume # 2

Issue #3

Date 3/05/2020

The founder of the Colorado Emergency Reporting Net.

KE0GNS /SK, Sydney M Cleveland

The Colorado Emergency Reporting Net

Net meeting every night at 6:30pm Mountain time.

Great things are happening with the

Colorado Emergency Reporting Net group

and the Colorado Connection group.

Be sure to read Mike's emails on the subject.

When telling others about our group please send them to our Web site.

WWW.CO-CERN.ORG

On more than one occasion we have people that abuse and misuse the system

folks make bogus calls that are not true emergencies.

We hear these calls from time to time, and these folks come back and make another call.

They have issues.

On more than one occasion the call was completely bogus.

There was no 911 needed.

However, in doing our job. We take the call anyway, we pass that information on to the 911 and first responders.

The need for this is that we do not know if it's bogus call at the time.

We can only assume that it is bogus and we let the first responders sort out what is real or not.

Gather the information, give it to 911 so they can go out and determine if it's bogus.

You never know when something is going to escalate.

Remember to always take the call and fill out an incident report

and E-mail it to Mike and Richard

The initial incident report is used for the Colorado Emergency Reporting Net analytics.

It is also used for everyone's protection keeping a log of incident reports and if needed, we can get real-time copy of the call, which is recorded on www.Broadcastify.com and is archived in 1 hour blocks based on date and time.

Don't forget to change your clocks on Sunday

TEAM WORK makes it happen...

Have a great March 2020

Special Note:

[Buckhorn Mountain/Ft Collins](#) The repeater is on 146.730MHz with a -600 offset, the normal 88.5Hz input tone is needed. As with all of the repeaters if a party is experiencing local interference a 123Hz tone can be used on the receive side.

As always we would like to thank all of our volunteers, past, present, and future.

They provide their time equipment and expertise to make The Colorado Emergency Reporting Net a fully functional group of amateur radio operators providing a public service.

Not a ham operator yet... Join us at our 6:30pm local time for our check in net.

On your scanner, frequencies are listed on our web site.
